

What are ChatGPT plugins?

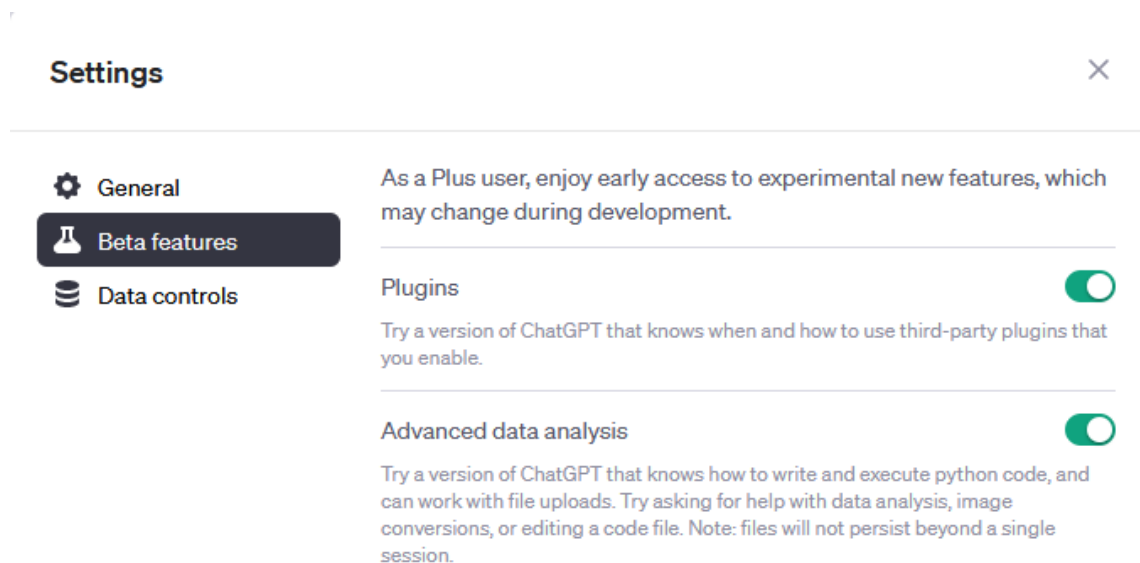

ChatGPT plugins are specially developed tools that you can add to your AI chatbot to enhance the capabilities of the GPT-4 model. Although OpenAI releases only a few of them, the majority are developed by third-party developers. You can access the full list of plugins by visiting the Plugin Store within ChatGPT Plus Plan.

There are two ways to access ChatGPT plugins

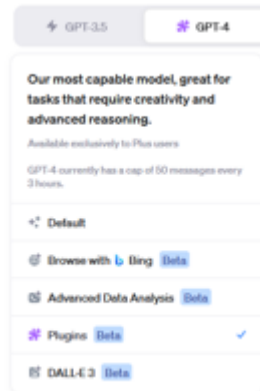

- ChatGPT Users need the paid ChatGPT Plus version. You can purchase this for about \$20 per month. In the Plus version you have early / exclusive access to various features such as plugins or web browsing.
- Join the waitlist – <https://openai.com/waitlist/plugins> (Currently only available for developing plugins).

How to install ChatGPT Plugins?

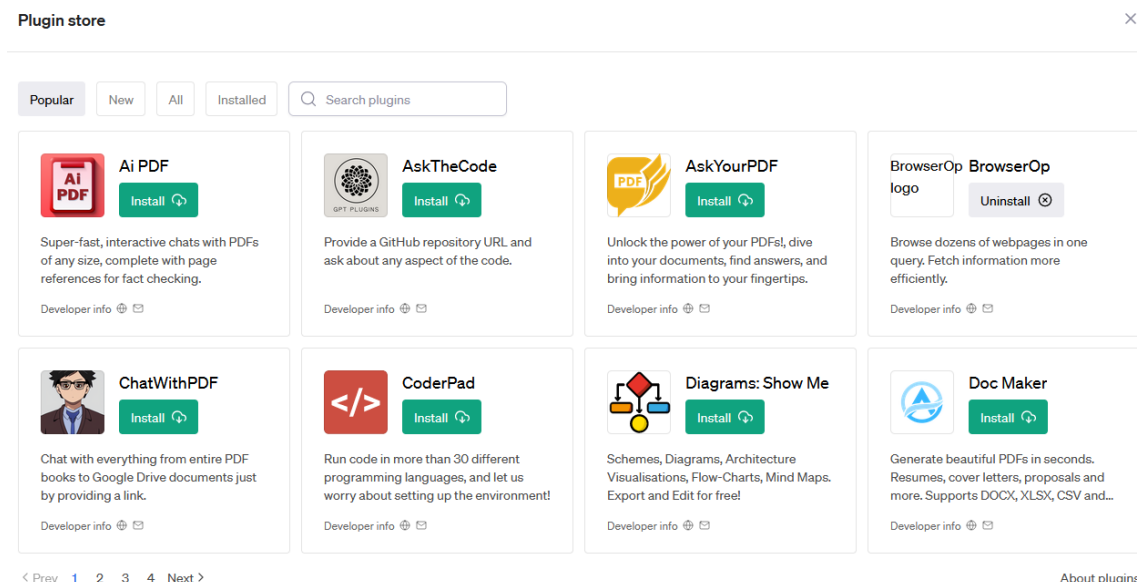

1. Open <https://chat.openai.com/>
2. Enable the Plugins feature by going to Settings > Beta Features and toggling the Plugins setting (You can also toggling Web browsing if you want to test that features too).

3. Select "GPT-4" and tick the "Plugins Beta" option from the dropdown menu.

4. Select the Plugin Store and install the plugins you want to use.

5. After installation, you will see the plugin logos appear under 'Plugins' which means that you have successfully added the plugin.

Now that you have access to the plugin store, you can start empowering ChatGPT-4 with new capabilities. Here are the top ChatGPT plugins that not only enhance your AI chatbot with additional features but will also make you more productive and resourceful.
